SUMMARY

Computer Engineering student at Marmara University, completed an Erasmus+ exchange at Universidad de Oviedo. I build systems end to end and ship them: a multi-tenant AR platform with an SDK published on npm, a peer-to-peer voice chat in **Rust**, and a self-hosted **Next.js** site behind my own Docker, monitoring and CI/CD stack. Comfortable across **Java**, **Go**, **Rust**, **TypeScript** and **Python**, with tests and observability as standard parts of the work.

EDUCATION

Marmara University	Istanbul, TR
<i>BS in Computer Engineering (GPA 3.34/4.00) — Minor in Business Administration</i>	2022 – Present
Universidad de Oviedo	Oviedo, ES
<i>Erasmus+ Exchange Student, Computer Science</i>	2026

SELECTED PROJECTS

ARpoly — Augmented Reality API Platform 2026
Node.js, Express, MongoDB/GridFS, Redis + BullMQ, React, Three.js, Swift, Python
– Multi-tenant REST platform that turns phone video of an object into a 3D model (GLB + USDZ) for instant AR display with no app install. 280+ automated tests, GitHub Actions CI/CD to GHCR, Prometheus/Grafana.
– Client SDK on npm as [@arpoly/react](https://github.com/bilalyazicioglu/arpoly) (Apache-2.0); modular backend wrapping Apple PhotogrammetrySession and CUDA Gaussian splatting.

tincan — Serverless Terminal Voice Chat 2026
Rust, iroh/QUIC, Opus, ratatui • github.com/bilalyazicioglu/tincan-cli
– Terminal voice chat with no central server: room coordinator hands out invite codes with zero port forwarding, VPN, or accounts.
– Direct P2P audio mesh via QUIC datagrams, Opus codec, jitter buffering, and Argon2id handshake. 93 automated/integration tests.

Personal Portfolio & Monitoring Stack 2026
Next.js, TypeScript, MDX, Docker, Nginx, Prometheus/Loki/Grafana • bilalyazicioglu.com
– Self-hosted full-stack web application in Docker behind Nginx and Cloudflare Tunnels with real-time Grafana dashboards. Browser-based MDX editor secured exclusively via private Tailscale network.

EXPERIENCE

Kombi Klima Shop Istanbul, TR
Software Developer Intern 2025
– Extended an e-commerce backend in **Java/Spring Boot**, improving system performance and order processing workflows.
– Built a **SQL**-based stock automation system that replaced manual tracking and significantly reduced counting errors.

Software Architecture Project ([yovi_enlb](https://yovi-enlb.com)) Oviedo, ES
Developer / Architect — Universidad de Oviedo 2026
– Built a multi-service hexagonal game engine in **Rust**, owning game logic and bots in a six-person team, with **Docker** deployment, **GitHub Actions** CI/CD, and arc42 documentation.

SKILLS

Languages: Java, Go, Rust, Python, C, SQL, TypeScript, JavaScript
Backend & Data: Spring Boot, Node.js/Express, REST APIs, PostgreSQL, MySQL, MongoDB, Redis
Frontend & DevOps: React, Next.js, Three.js, Tailwind CSS, Docker, GitHub Actions, Nginx, Cloudflare, Prometheus, Grafana, Loki
Spoken: Turkish (Native), English (Proficient), Spanish (Elementary)

LEADERSHIP & ACTIVITIES

Tuta — Open Source: Localization Translator for a privacy-first email and calendar client.
Basketball: Marmara University team and Universidad de Oviedo team — 10+ years of competitive play.
